Presentation Speech

Plant Docs Assistant · Consulting Pitch

Speaker Notes (What You Say to the Panel)

1. Opening / Safety

Addressing the Plant Manager & EHS Lead

> “We know **your top priority is keeping people safe on the floor**. Supervisors are often caught between three different document sets, and hesitation or a wrong search can lead to injury or scrap. This system treats **worker safety as a hard constraint**—any query touching lockout, chemicals, or guards **automatically pulls in safety procedures** and **warns supervisors before they act**. If it's not in the docs, **it refuses to guess**.”

2. Security

Addressing IT Security

> “For IT security, **your proprietary plant manuals and data never leave your control**. All documents and the vector database **reside on your local infrastructure**. The browser never talks directly to the AI provider, and **prompt-injection guardrails and automatic redaction** ensure complete data protection and **auditability**.”

3. Accuracy & Trust

Addressing the Quality Lead

> “Every single answer includes **clickable citations down to the exact section and page**. Our **hybrid search** combines keyword precision with semantic understanding, matching the **exact part numbers and valve tags** your team uses every day, backed by a **100% routing accuracy in our test sets**.”

4. Next Steps & Closing

Closing the pitch

> “It delivers answers in **about three seconds for a fraction of a cent**. Our path to production is straightforward: we are ready to deploy **an initial pilot using your actual controlled documents**, letting your EHS and Quality teams **review every output against the full audit log**, with **enterprise SSO** scheduled for wider rollout.”

Key Improvements Made for the Customer

- **Visual Hierarchy:** Replaced long paragraphs with punchy bullet points starting with bold action verbs/outcomes, making it immediately readable for busy executives.
- **Audience Alignment:** Grouped features directly to speak to the pain points of the four stakeholders (Plant Manager, EHS, IT Security, Quality).
- **Conversational Tone:** Shifted the speaker notes to sound like a confident, consultative advisor rather than an automated checklist reader.
